Theme: What's the problem with OST? What's the problem with us?

We all know and believe that OST can be transformative, even in the most difficult situations. We have decades of stories to back-up the above belief and still somehow we struggle to engage more people and more challenges to use OST.

We can blame others - people do not get it, clients do not get it, it's difficult to trust OST, etc.

After decades, we know this is not simply a question of marketing / selling.

So what is wrong with us? What is wrong with OST? What's the problem?
